

BIOL 643: Biology of Addiction

Fall 2022 Course Syllabus

COURSE SUMMARY

The course reviews the biological mechanisms of addiction as substance abuse. The biological mechanisms fall into three main categories: Brain systems involved, such as the mesolimbic reward system; Cells, such as midbrain dopaminergic neurons and their target cells in the striatum; Molecules, such as neurotransmitters, for example dopamine, norepinephrine and GABA and receptors such as cannabinoid receptors. The course also briefly discusses genetic factors involved in addiction.

TEXTBOOK

[Psychopharmacology, 4rd ed, by Meyer, Ferrar, Biezonski, Yates. Oxford University Press](#)

INSTRUCTOR

Farzan Nadim, farzan@njit.edu, CKB 420E, 973-596-8453

OFFICE HOURS

TR 11:30 AM – 12 PM and by appointment.

LEARNING GOALS

- To understand the definition of addiction and substances of abuse.
- To understand the basics of pharmacokinetics and pharmacodynamics.
- To describe neurotransmitters and neuromodulators and their receptors, and to understand the role of these molecules in brain function.
- To describe drug actions on different brain systems and outline which drugs lead to which effects according to their brain targets.
- To describe the major categories of drugs of abuse and to outline the mechanistic actions of each drug category.
- To further develop critical thinking skills. This will be measured in the ability to interpret graphs, experimental designs, and problem discussion. Students will be required to participate in instructor-led discussions of the material as they analyze problems and propose possible mechanisms related to addiction and the nervous system. Weekly quizzes will be used to test some of these goals and reinforce the learning of the material.

COURSE OUTLINE

Introduction and course overview

- Addiction and the Brain

Module 1: Addiction

- Introductory Lectures
- What is Addiction?
- DSM-5 definition of Substance Abuse
- Is Addiction a Disease?

Module 2: Substances of Abuse

- Cannabinoids
- Opioids
- Alcohol
- Sedative-Hypnotics
- Stimulants
- Nicotine and Caffeine
- Hallucinogens (time permitting)

Module 3: Psychopharmacology

- Pharmacokinetics
- Pharmacodynamics
- Biobehavioral effects

Module 4: The Central Nervous System

- **Basics**
 - Cells of the Nervous System
 - Electrical signals and action potentials
- **Neurotransmitters and Neuromodulators**
 - Glutamate
 - GABA
 - Catecholamines (dopamine and norepinephrine)
 - Serotonin
 - Acetylcholine
- **Structure and function of the nervous system**
 - Basic neuroanatomy
 - The Limbic system including the amygdala and hippocampal structures
 - The midbrain dopaminergic systems and their targets
 - The brainstem noradrenergic and serotonergic systems
 - Cortical structures involved in mood and reward

IMPORTANT INFORMATION, RULES AND POLICIES

- **Accommodation and support services for students with disabilities:** The Office of Accessibility Resources and Services (OARS) offers long term and temporary accommodations for undergraduate, graduate and visiting students at NJIT. For further information regarding self identification, the submission of medical documentation and additional support services provided please visit the [OARS website](#).
- **If you already know that you will miss an exam**, discuss it with me (the instructor) beforehand. Otherwise, **if you miss an exam** due to a valid excuse, medical or other, you need to provide valid and verifiable documentation to the [Dean of Students Office](#) and ask them to inform the instructor. Make-up assignments will be determined on a case-by-case basis.
- **Academic Integrity** is the cornerstone of higher education and is central to the ideals of this course and the university. Cheating is strictly prohibited and devalues the degree that you are working on. As a member of the NJIT community, it is your responsibility to protect your educational investment by knowing and following the [academic code of integrity policy](#). Please note that it is my professional obligation and responsibility to report any academic misconduct to the Dean of Students Office. There will be **ZERO tolerance for violations of academic integrity**. Any student found in violation of the code by cheating, plagiarizing or using any online software inappropriately will result in disciplinary action. This may include a score of 0 for an assignment, a grade of F for the course, and/or suspension or dismissal from the university. If you have any questions about the code of Academic Integrity, please contact the [Dean of Students Office](#).

GRADING POLICY AND SCALE

- The course will have two midterms, on **10/6** and **11/10**, and a non-cumulative final whose date and time will be scheduled by the Registrar. Each of these three exams will cover one third of the course.
- Quizzes will be administered on Canvas and are limited in time and date.
- Every second Thursday class will include class discussions on topics posted on Canvas beforehand. Assigned students should do research on the topic for the purpose of in class discussions. This is 5 points of your Participation grade. The rest of your participation grade will be based on asking questions and being vocal in class discussions.

Assignment	%
Class Discussions and Participation	15
Online Quizzes	15
Midterm Exam I	20
Midterm Exam II	20
Final Exam	30
TOTAL	100

Grading Scale	
A	90 - 100
B+	80 - 89
B	73 - 79
C+	66 - 72
C	60 - 65
F	0 - 60
